Warning

This report is designed to provide sponsors with a document enabling them to assess the security level of a product under the conditions of use and operation defined in this report for the evaluated version. It is also designed to provide the potential purchaser of the product with the conditions under which he may operate or use the product so as to meet the conditions of use for which the product has been evaluated and certified; that is why this certification report must be read alongside the evaluated user and administration guidance, as well as with the product security target, which presents threats, environmental assumptions and the supposed conditions of use so that the user can judge for himself whether the product meets his needs in terms of security objectives.

Certification does not, however, constitute a recommendation product from DCSSI (Central Directorate for Information Systems Security), and does not guarantee that the certified product is totally free of all exploitable vulnerabilities.

Any correspondence about this report has to be addressed to :

Secrétariat Général de la Défense Nationale
Direction Centrale de la Sécurité des Systèmes d'Information
Centre de certification
51, boulevard de la Tour Maubourg
75700 PARIS cedex 07 SP

Reproduction of this document without any change or cut is authorised.

Certification report reference

2006/27

Product name

ST19NR66B secure microcontroller

Product reference

**ST19NR66 revision B microcontroller
(dedicated software ZXB, maskset K7H0A)**

Protection profile conformity

PP/9806 – PP BSI-PP-002-2001

Evaluation criteria and version

**Common Criteria version 2.3
compliant with ISO 15408:2005**

Evaluation level

**EAL 5 augmented
ALC_DVS.2, AVA_MSU.3, AVA_VLA.4**

Developer(s)

STMicroelectronics
Smartcard IC division, ZI de Rousset, BP2, 13106 Rousset Cedex, France

Sponsor

STMicroelectronics
Smartcard IC division, ZI de Rousset, BP2, 13106 Rousset Cedex, France

Evaluation facility

Serma Technologies
30 avenue Gustave Eiffel, 33608 Pessac, France
Phone: +33 (0)5 57 26 08 64, email : m.dus@serma.com

Recognition arrangements

SOG-IS

The product is recognised at EAL4 level.

Introduction

The Certification

Security certification for information technology products and systems is governed by decree number 2002-535 dated April, 18th 2002, and published in the "Journal Officiel de la République Française". This decree stipulates that:

- The central information system security department draws up **certification reports**. These reports indicate the features of the proposed security targets. They may include any warnings that the authors feel the need to mention for security reasons. They may or may not be transmitted to third parties or made public, as the principals desire (article 7).
- The **certificates** issued by the Prime Minister certify that the copies of the products or systems submitted for evaluation fulfil the specified security features. They also certify that the evaluations have been carried out in compliance with applicable rules and standards, with the required degrees of skill and impartiality (article 8).

The procedures are available on the Internet site www.ssi.gouv.fr.

ANNEX 1. EVALUATION LEVEL OF THE PRODUCT.....	13
ANNEX 2. EVALUATED PRODUCT REFERENCES	14
ANNEX 3. REFERENCE RELATED TO THE CERTIFICATION	16

1. The produit

1.1. Presentation of the product

The evaluated product is the ST19NR66 (revision B) microcontroller (dedicated software ZXB, maskset K7H0A) developed by STMicroelectronics. This product includes a software test (“Autotest”) and a software library (system management, crypto library), stored in ROM memory.

The microcontroller aims to host one or several software applications and to be embedded in a plastic support to create a Smartcard with multiple possible usages (identity documents, banking, health card, pay-TV or transport applications ...) depending on the Embedded Software applications. However, only the microcontroller is evaluated. The software applications are not in the scope of this evaluation.

1.2. Evaluated product description

The security target [ST] defines the evaluated product, its evaluated security functionalities and its operation environment.

This security target is compliant to both [PP9806] and [PP BSI] protection profiles.

1.2.1. Product identification

The configuration list [CONF] identifies the product’s constituent elements.

The certified version of the product can be identified by the following elements that can be checked with a microscope:

- Die identification (maskset): K7H0A;
- Dedicated software identification: XXB;
- Embedded software identification: this reference depends on the application embedded in ROM memory;
- Manufacturing site identification: STMicroelectronics_4 (Rousset).

1.2.2. Security services

The product provides mainly the following security services:

- Hardware initialisation & TOE attribute initialisation;
- TOE configuration switching and control;
- TOE logical integrity;
- Test of the TOE;
- Administrators authentication;
- Storage and Function Access Firewall;
- Physical tampering security function;
- Security violation administrator;
- Unobservability;
- Symmetric Key Cryptography Support;
- Asymmetric Key Cryptography Support;

- Unpredictable Number Generation Support.

1.2.3. Architecture

The ST19NR66B microcontroller is made up of:

- A Hardware part:
 - o An 8-bit processing unit;
 - o Memories: EEPROM (high density 66KB with integrity control, for program and data storage), ROM (224KB for user, 32KB for dedicated software : autotest and cryptographic libraries) and SRAM (6KB) ;
 - o Security Modules: Memory Access Control Logic (MACL), clock generator, security administrator, power management, memories integrity control ;
 - o Functional Modules: 8-bits timers, I/O management in contact mode (IART ISO 7816-3) and contactless mode (RFUART ISO 14443-B), True Random Number Generators, DES and RSA co-processing units.
- A dedicated software is embedded in ROM which comprises:
 - o Microcontroller test capabilities («Autotest ») ;
 - o System and Hardware/Software interface management capabilities
 - o ISO 14443-B interface management capabilities;
 - o Cryptographic libraries: DES (E-DES implementation), AES and RSA which are included in the product security target.

1.2.4. Life cycle

The product's life cycle is organised as follow:

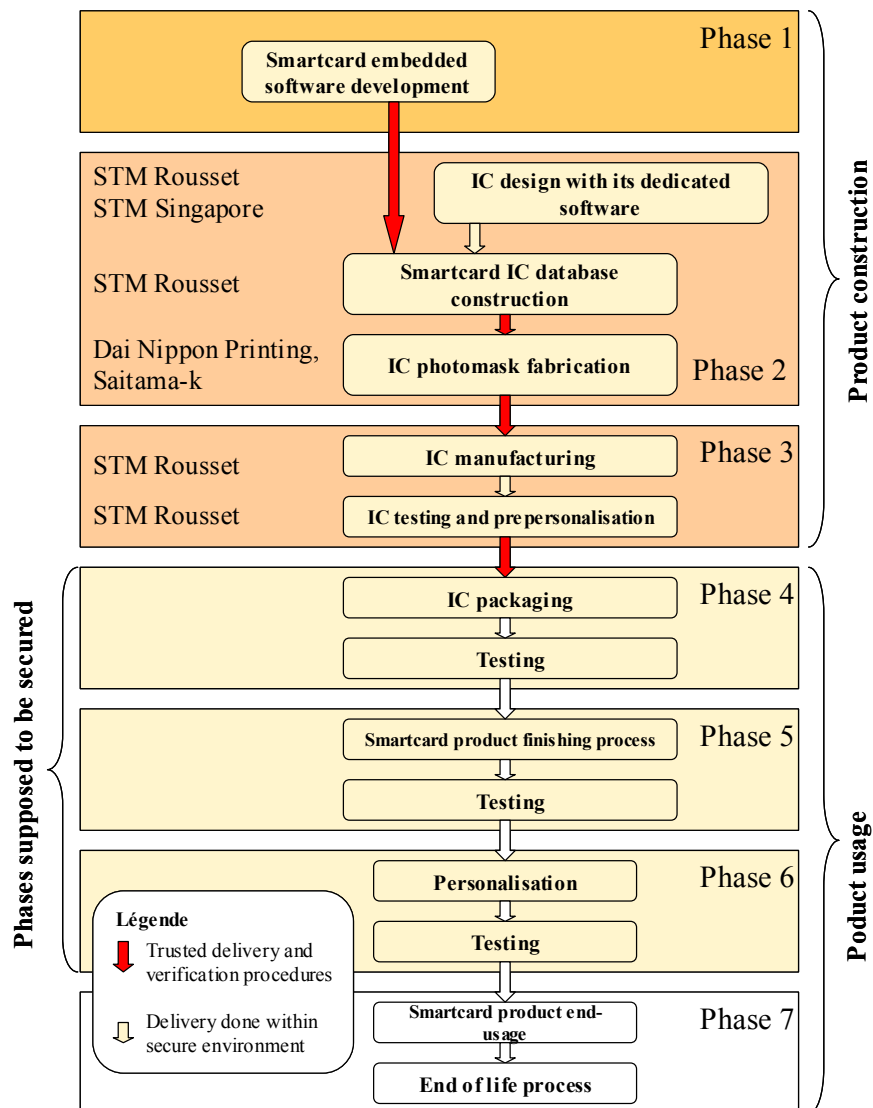

Figure 1 – Life cycle

The product is designed, prepared and tested by:

STMicroelectronics

Smartcard IC division
 ZI de Rousset, BP2
 13106 Rousset Cedex
 France

A part of the design is realised by:

STMicroelectronics

28 Ang Mo Kio - Industrial park 2
 Singapore 569508
 Singapore.

The photo masks of the product are manufactured by:

DAI NIPPON PRINTING CO., LTD

2-2-1, Fukuoka, kamifukuoka-shi,
Saitama-Ken, 356-8507
Japan

The product can be in one of its three possible configurations:

- «Test» configuration: product configuration at the end of developer IC manufacturing. The product is tested with a part of the Dedicated Software (called “Autotest”) within the secure developer premises. Pre-personalization data can be loaded in the EEPROM. The product configuration is changed to "Issuer" before delivery to the next user, and the part cannot be reversed to the «test» configuration.
- «Issuer» configuration: product configuration when delivered to users involved in IC packaging and personalization. Limited tests are still possible with the Dedicated Software (System Rom operating system). Personalization data can be loaded in the EEPROM.
The product configuration is changed to its final "User" configuration when delivered to the end user (the part cannot be reversed to the «Issuer» configuration).
- «User» configuration: Final product configuration. The developer test functionalities are unavailable. The Dedicated Software only provides the power-on reset sequence and routine libraries (mainly cryptographic services). After the power-on reset sequence, the product functionalities are driven exclusively by the Embedded Software.

1.2.5. Evaluated configuration

This certification report presents the evaluation work related to the product and the dedicated software library identified in §1.1. Any other embedded application, such as embedded applications intended specifically for the sake of the evaluation is not part of the evaluation perimeter.

Referring to the life-cycle, the evaluated product is the product that comes out the manufacturing, test and pre-personalization phase (phase 3).

For the evaluation needs, the product ST19NR66B was provided to the ITSEF with a dedicated test software (Card Manager reference: TZV) in a mode known as « open¹ ».

2. The evaluation

2.1. Evaluation referential

The evaluation has been performed in compliance with **Common Criteria version 2.3** [CC], and with the Common Evaluation Methodology [CEM].

For assurance components above EAL4 level, the evaluation facility own evaluation methods consistent with [AIS34], validated by DCSSI have been used.

In order to meet the specificities of smart cards, the [CCIC] and [CCAP] guides have been applied.

The ST19NR66B product has already been certified in 2006 with [2006/22] reference. Some complementary works have been performed on the Random Number Generator in order to assess the conformance to the AIS31 method criteria (see [AIS31]). Thus, the verdicts related to all the other evaluation works are re-used.

2.2. Evaluation work

The evaluation technical report [RTE], delivered to DCSSI the 1st December of 2006, provides details on the work performed by the evaluation facility and assesses that all evaluation tasks are “pass”.

2.3. Cryptographic mechanisms robustness analysis

The robustness of cryptographic mechanisms has not been analysed by DCSSI.

2.4. Random number generator analysis

The evaluated product provides a random number generator that can be used by the embedded software.

The evaluation facility has evaluated the random number generator with the [AIS31] and [FIPS 140] methodology.

The generator reaches the class “P2 – *SOF-high*” according to [AIS31] and Level 3¹ according to [FIPS 140].

¹ Only the [FIPS 140-2] subset related to random number generators has been evaluated and only regarding the statistical tests specified in the standard.

3. Certification

3.1. Conclusion

The evaluation identified in chapter 2 and described in the evaluation technical report [ETR], was carried out according to the current rules and standards, with the required competency and impartiality by a licensed evaluation facility. All the work performed permits the release of a certificate in conformance with the decree 2002-535.

This certificate testifies that the product “ST19NR66B secure microcontroller” submitted for evaluation fulfils the security features specified in its security target [ST] for the evaluation level EAL5 augmented.

3.2. Restrictions

This certificate only applies on the product specified in chapter 1.2 of this certification report.

This certificate provides a resistance assessment of the ST19NR66B product to a set of attacks, which remains generic due to the missing of any specific embedded application. Therefore, the security of a final product based on the evaluated microcontroller would only be assessed through the final product evaluation, which could be performed on the basis of the current evaluation results.

The user of the certified product shall respect the operational environmental security objectives summarized specified in the security target [ST] and shall respect the recommendations in the guidance [GUIDES], in particular:

- Security procedures must be applied during the product delivery to the users in order to maintain the confidentiality and integrity of the product and the related manufacturing and test data (prevent any copy, modification, theft, unauthorized manipulation or usage);
- The communication between a product developed based on the secured microcontroller and other products must be secured (in terms of protocols and procedures);
- The system (work station, terminal, communication...) must guaranty the confidentiality and the integrity of the sensitive data, which are stored or processed.

3.3. Recognition of the certificate

3.3.1. *European recognition (SOG-IS)*

This certificate is released in accordance with the provisions of the SOG-IS agreement [SOG-IS].

The European Recognition Agreement made by SOG-IS in 1999 allows recognition from Signatory States of the agreement¹, of ITSEC and Common Criteria certificates. The European recognition is applicable up to ITSEC E6 and CC EAL7 levels. The certificates that are recognized in the agreement scope are released with the following marking:

3.3.2. International common criteria recognition (CCRA)

This certificate is released in accordance with the provisions of the CCRA [CC RA]. However, it is only recognised for EAL4 level.

The Common Criteria Recognition Arrangement allows the recognition, by signatory countries², of the Common Criteria certificates. The mutual recognition is applicable up to the assurance components of CC EAL4 level and also to ALC_FLR family. The certificates that are recognized in the agreement scope are released with the following marking:

1 The signatory countries of the SOG-IS agreement are: Finland, France, Germany, Italy, The Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

2 The signatory countries of the CCRA arrangement are: Australia, Austria, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, India, Israel, Italy, Japan, The Netherlands, New Zealand, Norway, Singapore, Spain, Sweden, Turkey, United Kingdom and United States.

Annex 1. Evaluation level of the product

Class	Family	Components by assurance level							Assurance level of the product	
		EAL 1	EAL 2	EAL 3	EAL 4	EAL 5	EAL 6	EAL 7	EAL 5+	Name of the component
ACM Configuration management	ACM_AUT				1	1	2	2	1	Partial CM automation
	ACM_CAP	1	2	3	4	4	5	5	4	Configuration support and acceptance procedures
	ACM_SCP			1	2	3	3	3	3	Development tools CM coverage
