Paris, the

WARNING

This report is intended to provide people who request evaluations with a document allowing them to confirm the level of security offered by the product under the usage or operating conditions defined in this report for the evaluated version. It is also intended to provide a potential acquirer of the product with the circumstances under which they may operate or use the product in accordance with the operating conditions for which the product has been evaluated and certified; this is why the certification report must be read in conjunction with the evaluated usage and administration guides and with the product's security target, which describes the pre-supposed threats, environmental assumptions and presumed usage conditions so that the user can judge whether the product is suitable for their needs in terms of security objectives.

The certification does not in itself constitute a product recommendation by the Agence nationale de la sécurité des systèmes d'information (ANSSI) and does not guarantee that the certified product is completely free of vulnerabilities that can be exploited.

All correspondence relative to this report should be sent to:

Certification report reference	ANSSI-CC-2024/39
Product name	Strong Customer Authentication for Apple Pay on iPhone SE (3rd generation) with A15 Bionic running iOS 17.4
Product reference/version	iOS 17.4 (build 21E219)
Compliance with a protection profile	N/A
Evaluation criterion and version	Common Criteria version CC:2022, revision 1
Evaluation level	EAL2 augmented ADV_FSP.3, ALC_FLR.3
Developer	APPLE INC. 7 place d'Iéna 75016 Paris, France
Sponsor	APPLE INC. 7 place d'Iéna 75016 Paris, France
Evaluation facility	THALES/CNES 290 allée du Lac 31670 Labège, France
Applicable recognition agreements	<div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>CCRA</p>  </div> <div style="text-align: center;"> <p>SOG-IS</p>  </div> </div> <p>This certificate is recognized at level EAL2 increased by ALC_FLR.3.</p>

FOREWORD

The certification of security offered by information technology products and systems is governed by amended Decree 2002-535 dated April 18, 2002. This decree states that:

- the Agence nationale de la sécurité des systèmes d'information drafts certification reports. These reports specify the characteristics of the proposed security objectives. They may contain any warnings that their authors consider are worth mentioning for reasons of security. The people who order the reports may choose whether or not to communicate them to third parties or make them public (Art. 7);
- the certificates awarded by the Director General of the Agence nationale de la sécurité des systèmes d'information certify that the individual product or system submitted for evaluation meets the specified security characteristics. They also certify that the evaluations were carried out according to the current rules and standards, with the required level of competence and impartiality (Art. 8).

The certification procedures are available on the website www.cyber.gouv.fr.

1 Product

1.1 Product Presentation

The product evaluated is "Strong Customer Authentication for Apple Pay on iPhone SE (3rd generation) with A15 Bionic running iOS 17.4, iOS 17.4 (build 21E219)" developed by APPLE INC.

Apple Pay is a mobile payment solution developed by the company APPLE INC. After users register a bank card in their Apple device, they can use it to make payments. For the payment to be successful, users must authenticate themselves on the device using a passcode, a fingerprint or facial recognition.

1.2 Product Description

1.2.1 Introduction

The security target [ST] defines the evaluated product, its evaluated security functionalities and its operating environment.

1.2.2 Security Services

The main security services provided by the product are described in the security target [ST] in section 2.3.2 "TOE usage and major security features".

1.2.3 Architecture

The product is made up of elements described in the security target [ST] in section 2.4.1 "TOE Architecture".

1.2.4 Product Identification

The component elements of the product are identified in the configuration list [CONF].

The certified version of the product can be identified by the elements detailed in the security target [ST] in chapter 2.2 "Target of Evaluation Reference".

1.2.5 Life Cycle

The product lifecycle is described in chapter 2.4.3 "TOE Lifecycle" of the security target [ST].

For the evaluation, the evaluator considered the end user to be the sole user of the product.

1.2.6 Evaluated Configuration

The certificate covers the configurations detailed in chapter 2.2 "Target of Evaluation Reference" of the security target [ST].

2 Evaluation

2.1 Evaluation Standard

The evaluation was carried out in accordance with the Common Criteria [CC] and the evaluation methodology defined in the manual [CEM].

2.2 Evaluation Work

The evaluation technical report [ETR], which was delivered to the ANSSI on the day of its finalization by ITSEF (see date in bibliography), details the work performed by the evaluation facility and certifies that all evaluation tasks are “**successful**”.

2.3 Rating of Cryptographic Mechanisms According to ANSSI Technical Benchmarks

The encryption mechanisms implemented by the product’s security functions (see [ST]) were analyzed in accordance with procedure [CRY-P-01], and the results were recorded in the [ETR] evaluation report.

This analysis did not identify any non-compliances with respect to benchmark [ANSSI Crypto]. The independent vulnerability analysis carried out by the evaluator did not show any exploitable vulnerabilities for the targeted attack potential.

2.4 Random Number Generator

The product includes a random number generator that was analyzed in accordance with procedure [CRY-P-01].

This analysis did not identify any non-compliances with respect to benchmark [ANSSI Crypto].

The independent vulnerability analysis carried out by the evaluator did not show any exploitable vulnerabilities for the targeted attack potential.

3 Certification

3.1 Conclusion

The evaluation was carried out in accordance with the rules and standards in force, with the requisite expertise and impartiality for an accredited evaluation facility. The overall evaluation work performed allows the issuance of a certificate in accordance with Decree 2002-535.

This certificate certifies that the evaluated product satisfies the security characteristics set out in its security target [ST] for the specified evaluation level.

3.2 Usage Restrictions

This certificate covers the product specified in chapter 1.2 of this certification report.

Users of the product must ensure the compliance with the security objectives regarding the operating environment, as specified in the security target [ST], and to follow the recommendations found in the provided guides [GUIDES].

3.3 Recognition of the Certificate

3.3.1 European Recognition (SOG-IS)

This certificate is issued under the terms of the SOG-IS agreement [SOG-IS].

The 2010 SOG-IS European Recognition Agreement allows the recognition, by the signatory countries of the agreement¹, of ITSEC and Common Criteria certificates. European recognition applies up to level ITSEC E3 Basic and CC EAL4 when CC dependencies are satisfied. Certificates recognized under this agreement are issued with the following mark:

3.3.2 Common Criteria Recognition Arrangement (CCRA)

This certificate is issued under the terms of the CCRA agreement [CCRA].

¹ The list of signatory countries of the SOG-IS agreement is available at the agreement's website: www.sogis.eu.

The *Common Criteria Recognition Arrangement* agreement allows the recognition of Common Criteria certificates by the signatory countries².

The recognition applies up to the CC EAL2 level assurance as well as to the ALC_FLR family. Certificates recognized under this agreement are issued with the following mark:

² The list of signatory countries of the CCRA is available at the agreement's website: www.commoncriteriaportal.org.
